HOW TO EDIT · BREAKDOWN 01

The premium tour. Shot by shot.

This is the standard for every tour we edit from here on. Dr. Katherine Ahn walks us through a suite that is still under construction, and every raw room is answered by a rendering of the finished room on the exact word she names it. Study the angles, the grade, the renders and the captions, then build ours the same way.

CLIENT	Dr. Katherine Ahn · Aviara Aesthetic, Beverly Hills
VIDEO	Aviara #3: Dr. Ahn, Local Tour (Video 6 of 13)
FORMAT	9:16 vertical · 2160×3840 · 23.976 fps
RUNTIME	2:33
FOR	Every Puro Flow editor (Yash, Adrian and the team)

31	4.9s	8	~11 dB
shots in 2:33	average shot length	AI renderings of finished rooms	music sits under the voice

The rules · Structure · 31 shots · Color grade · AI renderings · Captions + transitions · Export checklist

THE STANDARD

Four rules for every tour

When we follow someone through a space, the camera has to feel expensive. That means stable, angled and moving for a reason.

Stable, always

Gimbal or locked off. If a clip shakes, stabilize it or cut it. **No shaky handheld in a tour.**

Never flat

Never park the camera square on the subject against a flat wall. Swing to a **3/4 angle**, put something in the foreground (ladder, doorframe, scaffolding) and place them off-center.

No slow zoom in or out

No scale keyframes, no Ken Burns push in the edit. It reads boring and cheap. **Movement comes from the camera** (follow, arc, slide, reveal) or from the render, never from a digital zoom.

New room, new angle

Every time she names a space, cut. Back-to-back shots never share a framing, and every raw room gets its render.

THE STRUCTURE

Place, then before and after, then the why

Six beats. The tour earns the message: by the time she explains her philosophy, we have already seen the space become real.

Establish
`0:00–0:03`
Two drone shots: Beverly Hills at golden hour, then the building. No voice yet.

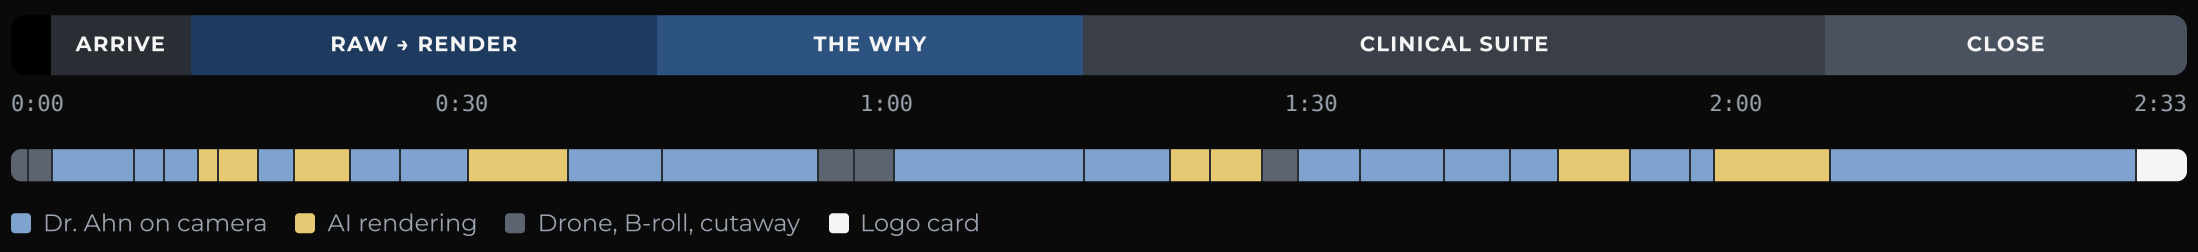

Arrive
`0:03–0:13`
Wide in the raw suite, punch in for "little tour", back wide for the entrance.

Raw → render
`0:13–0:46`
Reception, video wall, storefront. Each raw room cuts to its finished render.

The why
`0:46–1:15`
Consultation room. A black and white cutaway shows "most clinics", then root causes.

Clinical suite
`1:15–2:08`
The grade drops to low-key amber. Lab, treatment #2 and #3, each with a render.

Close
`2:08–2:33`
One 22 second talking head carries the message. Logo card on white curtains.

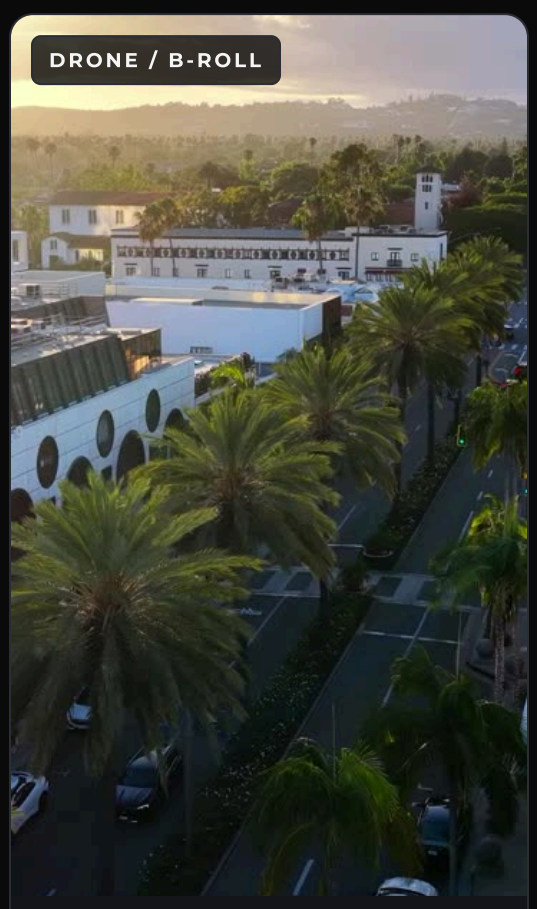

SHOT BY SHOT

31 shots, each one playing

Every clip below loops the actual shot from the final edit. Read the camera note for what the shooter did and the edit note for what we did with it.

All 31 | Dr. Ahn on camera | AI renderings | Drone + B-roll

01 0:00.0–0:01.2 · 1.2s

Drone: Beverly Hills, golden hour

CAMERA
High drone over a palm-lined boulevard with the sun on the horizon. Slow forward drift, perfectly smooth.

EDIT
Cold open. No title and no voice for the first 2.7 seconds, just music.

WHY IT WORKS
Location sells the brand before she says a word.

02 0:01.2–0:02.8 · 1.6s

Drone: the building

CAMERA
Drone holds on the courtyard of the building, warm late light on the brick and arches.

EDIT
Hard cut from the wide city to this one building.

WHY IT WORKS
City, then address. Two shots and we know exactly where we are.

03 0:02.8–0:08.5 · 5.7s

Wide: inside the raw suite

"So we are now inside the Aviara aesthetic suite"

CAMERA
Wide from a low position, ladder in the left foreground, Dr. Ahn small in frame among the raw walls. Stable.

EDIT
First caption appears with her first word.

WHY IT WORKS
We show the space honestly as a construction site. The ladder adds depth so it never looks flat.

04 0:08.5–0:10.6 · 2.1s

Punch in at 3/4: little tour

"I'm going to give you a little tour"

CAMERA
Medium shot from a new angle, roughly 45° off her, so she is never square to the lens.

EDIT
Big bold "little tour" title with a sparkle, then a warm light leak carries us out.

WHY IT WORKS
Same moment, new angle. The cut resets attention without leaving the room.

05 0:10.6–0:12.8 · 2.2s

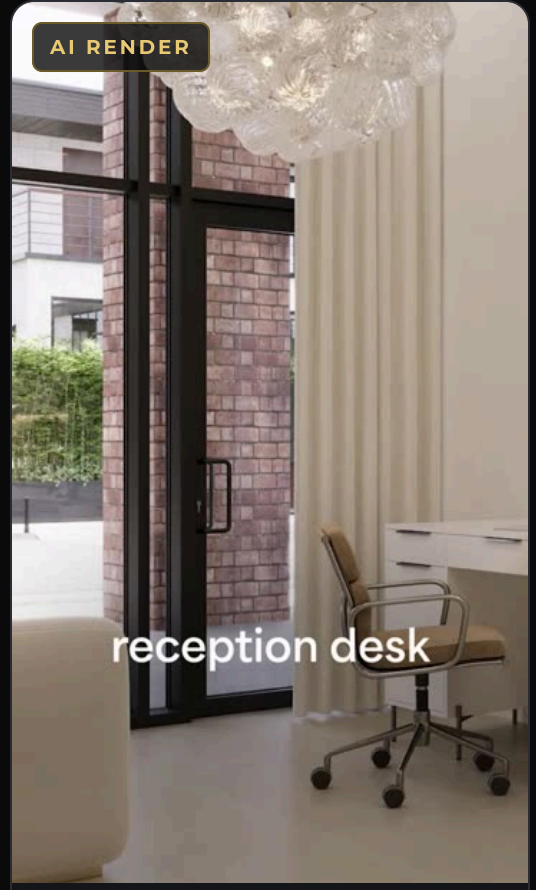

Back wide: the entrance

"So this is the entrance."

CAMERA
Back to the wide, arms open to present the room.

EDIT
Cut on her gesture, so the move does the work.

WHY IT WORKS
Her open arms make the reveal feel welcoming.

06 0:12.8–0:14.2 · 1.4s

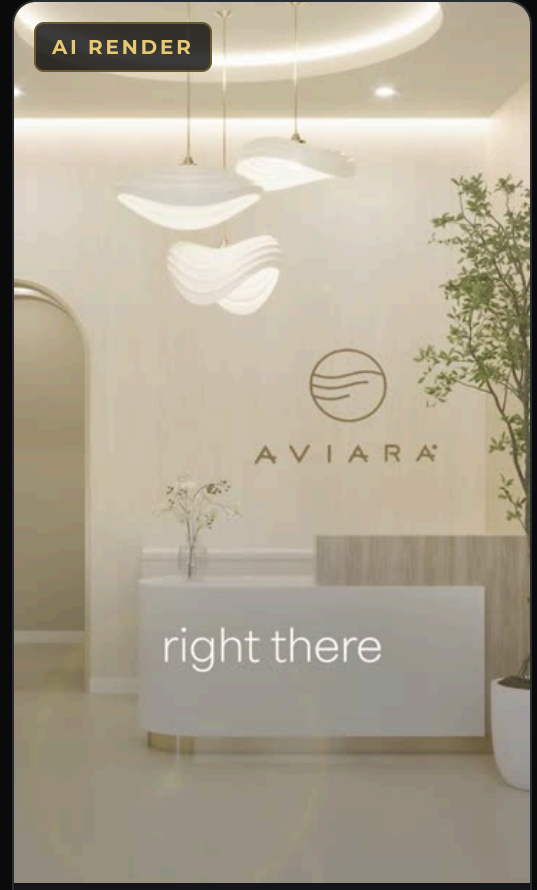

Render: reception

"And our reception desk"

CAMERA
Finished entrance with glass doors, chandelier and desk chair. Slow lateral slide.

EDIT
Cut in on "And our", out with a light leak.

WHY IT WORKS
First render. Sets the pattern: raw room, then the finished room.

07 0:14.2–0:16.9 · 2.7s

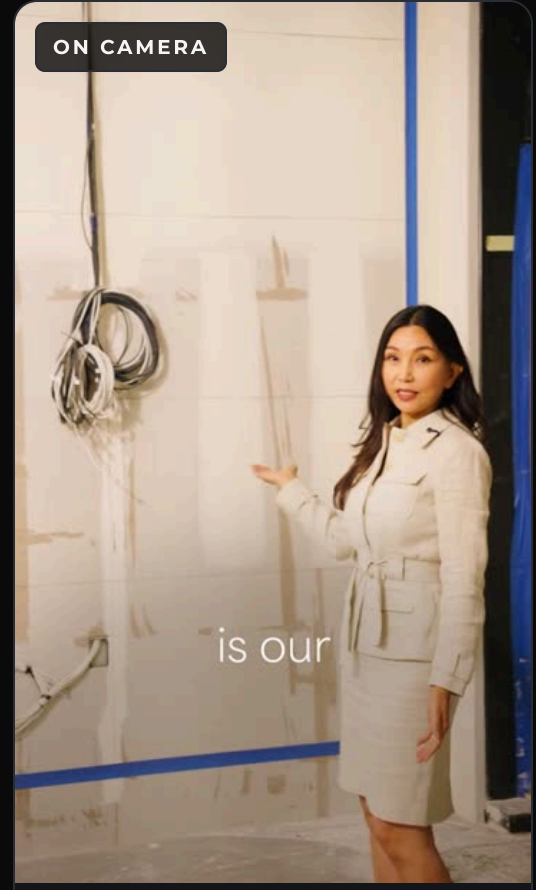

Render: the Aviara desk

"will be right there"

CAMERA
Reception desk with the Aviara logo, cove light, an olive tree. Slow slide that reveals the plant.

EDIT
Held long enough to read the logo.

WHY IT WORKS
The brand shows up on the wall of the room she is describing.

08 0:16.9–0:19.4 · 2.5s

Follow: to the video wall

"And to the right of me is our video wall"

CAMERA
She walks right toward a taped raw wall. The camera pans with her on the gimbal.

EDIT
"video wall" big bold title, which ghosts out as we cut.

WHY IT WORKS
Movement leads the eye to the empty wall we are about to fill.

09 0:19.4–0:23.3 · 3.9s

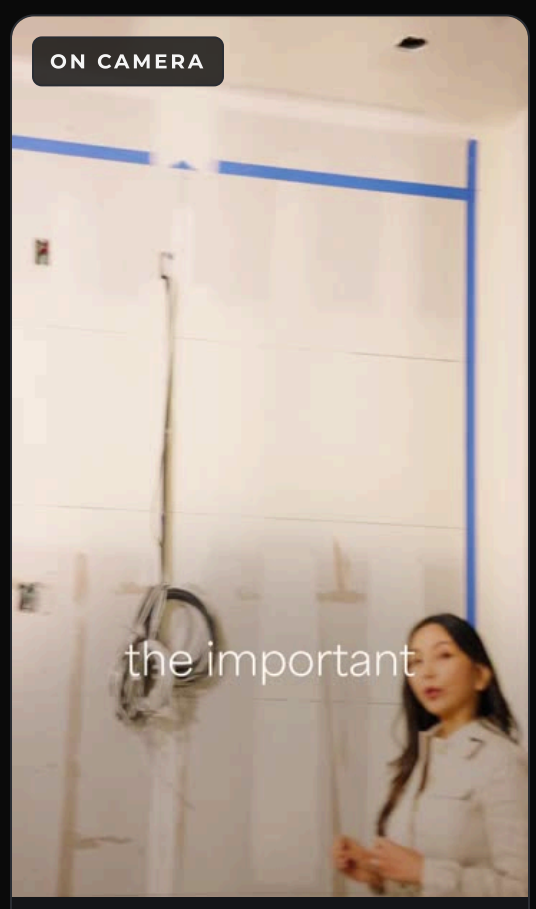

Render: the video wall

"This video wall will be used to educate our patients"

CAMERA
The finished wall of screens playing fashion imagery, framed by plants.

EDIT
"educate" sits bold above "our patients".

WHY IT WORKS
The empty wall from the shot before is now real.

10 0:23.3–0:26.7 · 3.4s

Negative space: the raw wall

"on all the important ... that we have to offer."

CAMERA
She sits low in the bottom right of frame, the raw wall and hanging conduit fill the top.

EDIT
Captions sit beside her, not over her face.

WHY IT WORKS
Off-center framing is the opposite of flat. The space is the subject.

11 0:26.8–0:31.5 · 4.7s

Follow from behind: the storefront

"So this storefront right here area will focus on"

CAMERA
Camera follows behind her shoulder into the storefront, she turns and points. Yellow scaffolding frames the shot.

EDIT
Light flash out of the shot.

WHY IT WORKS
Following from behind puts the viewer in the room with her.

12 0:31.7–0:38.8 · 7.1s

Render: the arched shelves

"products that will help our patients breathe better, live better, and smile better"

CAMERA
Arched retail niches with warm under-shelf light. Slow lateral slide.

EDIT
Key words go bold on each beat: breathe, live, smile.

WHY IT WORKS
The longest render, because it carries the promise of the brand.

13 0:38.8–0:45.5 · 6.7s

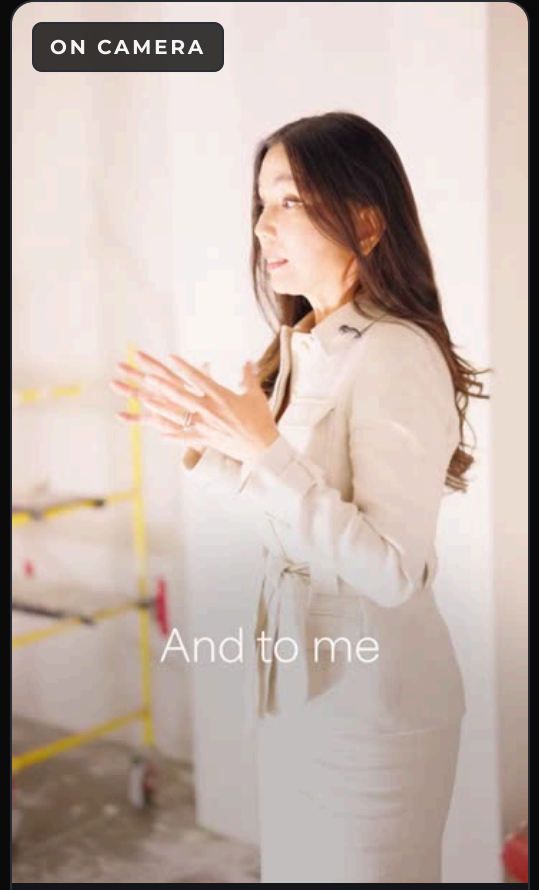

Medium: three arches

"so that's why we have three arches representing the three pillars of the foundation of health."

CAMERA
Medium wide, she gestures to the three raw arch openings behind her.

EDIT
Whip blur out to the next room.

WHY IT WORKS
The raw arches pay off the render we just saw. The design has meaning.

14 0:45.6–0:56.7 · 11.1s

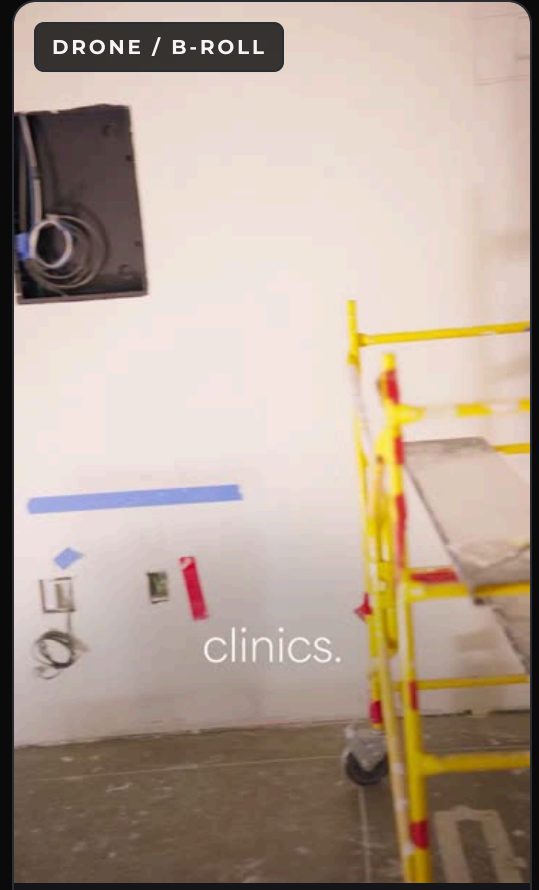

High-key MCU: consultation room

"and consultation room. And to me this is the most important room"

CAMERA
Bright, creamy room. Medium close-up at 3/4, she turns to show the room and back to us. Smooth gimbal.

EDIT
"important room" in bold.

WHY IT WORKS
The brightest room is the most important room. The light says it too.

15 0:56.7–0:59.1 · 2.4s

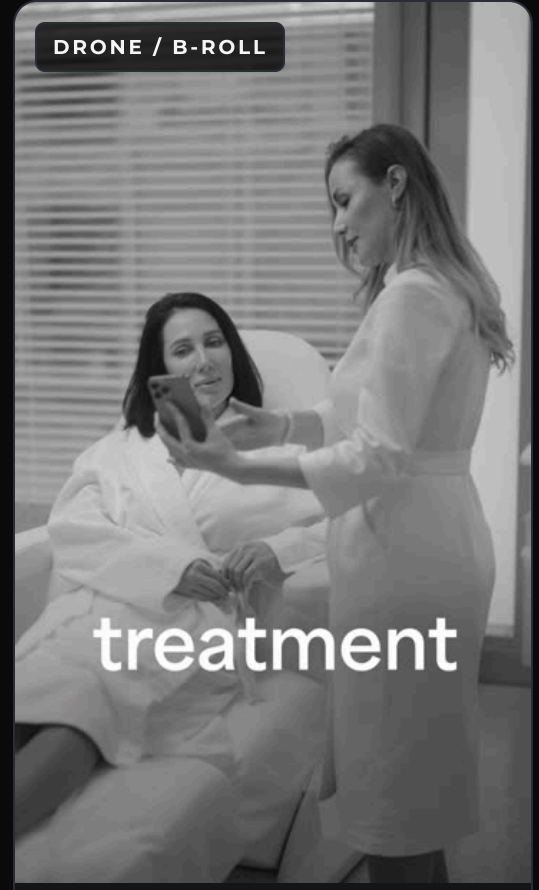

Insert: across the raw room

"most wellness clinics."

CAMERA
Pan across a raw wall with fixtures to the scaffolding.

EDIT
B-roll over her voice.

WHY IT WORKS
Gives the eye a rest before the contrast beat.

16 0:59.1–1:01.9 · 2.8s

Black and white cutaway

"focus on treatment, but..."

CAMERA
A clinic consult in full black and white.

EDIT
Huge bold "treatment", then "but...".

WHY IT WORKS
Black and white means the old way. She never has to name anyone.

17 1:01.9–1:15.5 · 13.6s

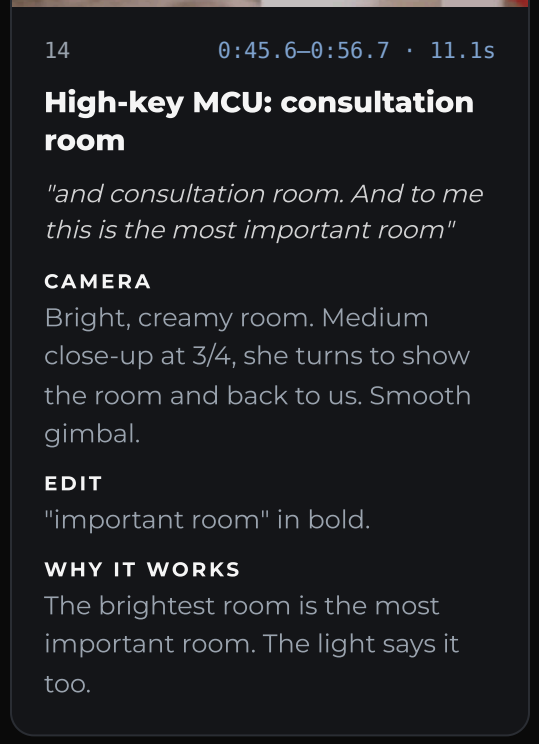

Back in color: root causes

"what we really need is to understand the patient's problems, their root causes"

CAMERA
Same consultation room setup, she turns into the lens as she makes the point.

EDIT
Hand-drawn circle around "root causes", scribble under "improve".

WHY IT WORKS
Color returns with her answer. The marks make the big idea stick.

18 1:15.5–1:21.5 · 6.0s

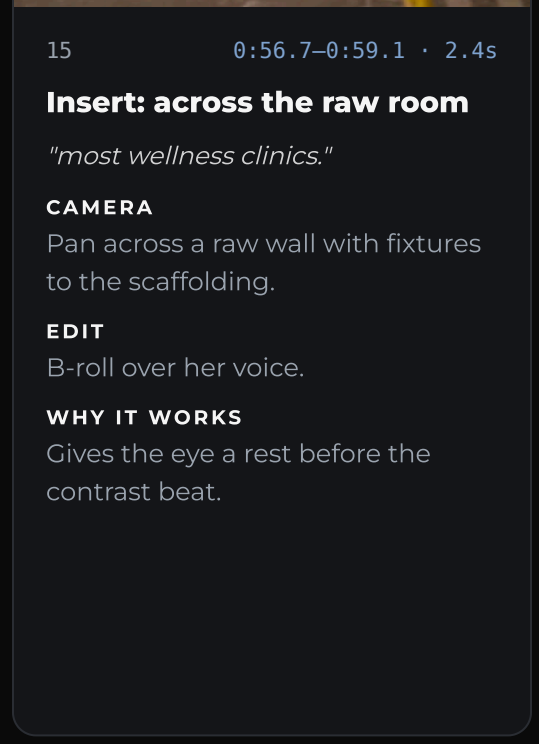

Doorframe reveal: clinical suite

"now we're inside our clinical suite, and right side, we have our"

CAMERA
A dark doorframe passes the lens and reveals her face in low light. She turns and leads us deeper.

EDIT
The grade drops to low-key amber on this cut.

WHY IT WORKS
Foreground wipe plus a mood change says we entered a new kind of room.

19 1:21.5–1:24.3 · 2.8s

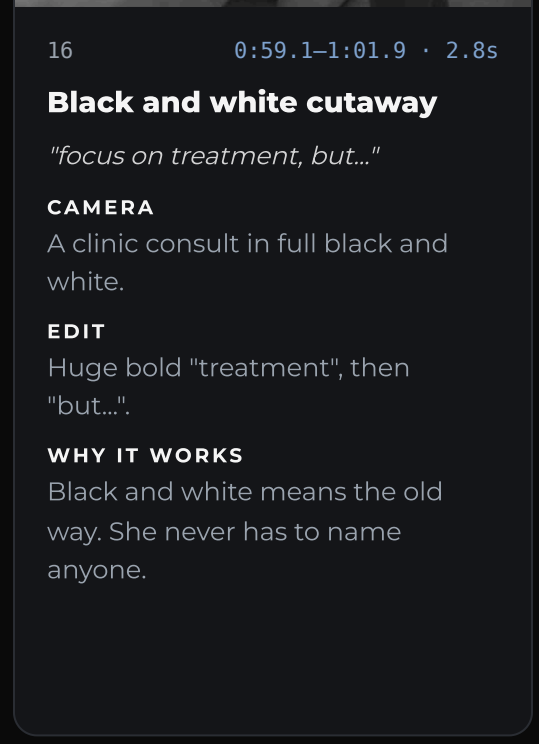

Render: esthetic and longevity suite

"esthetic and longevity suite."

CAMERA
Treatment chair against onyx shelving. Slow slide left.

EDIT
"esthetic" and "longevity suite." in bold.

WHY IT WORKS
The render stays bright, which lifts the dark section.

20 1:24.3–1:27.9 · 3.6s

Render: the cabinetry

"So here we will focus on all the natural regenerative approaches to"

CAMERA
Second render of the same suite, sliding across the cabinetry.

EDIT
Two renders back to back for one room.

WHY IT WORKS
A second angle makes the room feel real, not like a single still.

21 1:27.9–1:30.3 · 2.4s

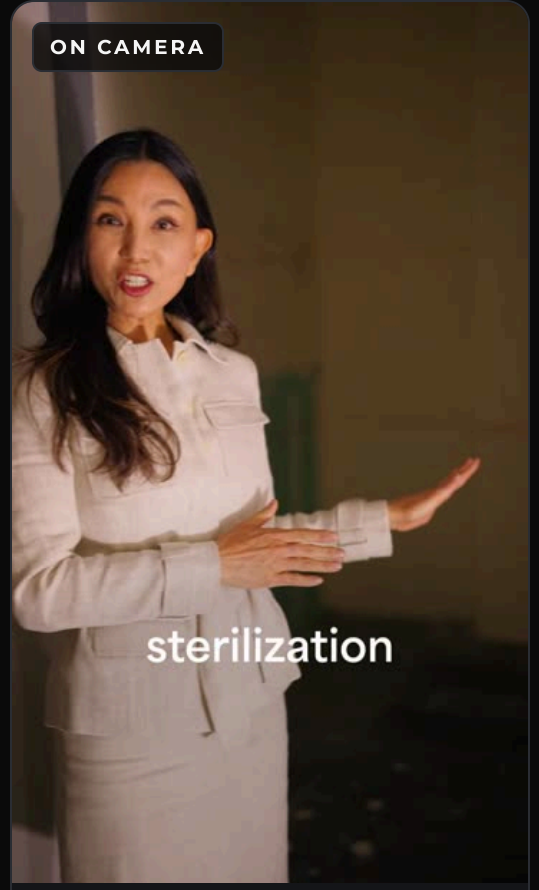

Flare pass

"health and beauty."

CAMERA
Dark room with green tile, a practical light flares across the lens.

EDIT
Used as the transition into the lab.

WHY IT WORKS
An in-camera transition, no plugin needed.

22 1:30.3–1:34.7 · 4.4s

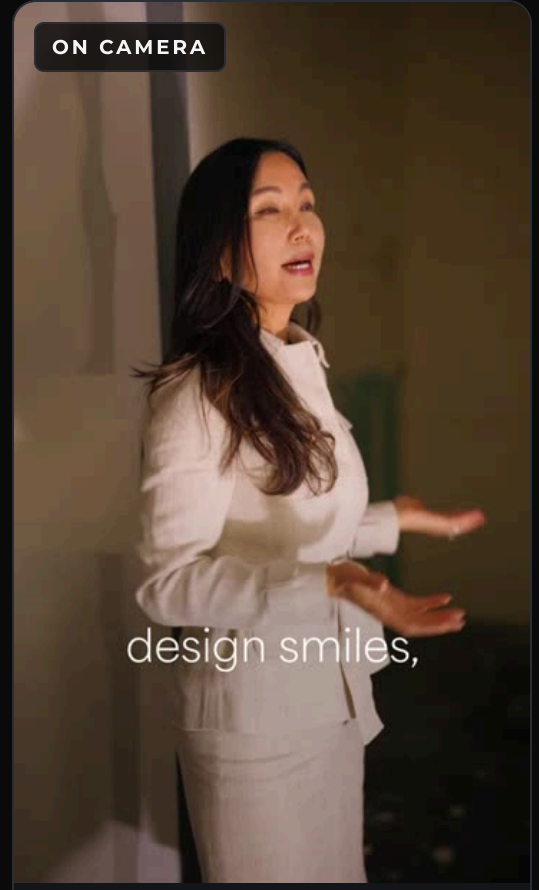

Side light: the lab

"This is our sterilization and laboratory."

CAMERA
Medium in a dark doorway, one soft window light from the side. She gestures into the room.

EDIT
"sterilization" and "laboratory." in bold.

WHY IT WORKS
One motivated light source. That is what makes low-key look expensive.

23 1:34.7–1:40.6 · 5.9s

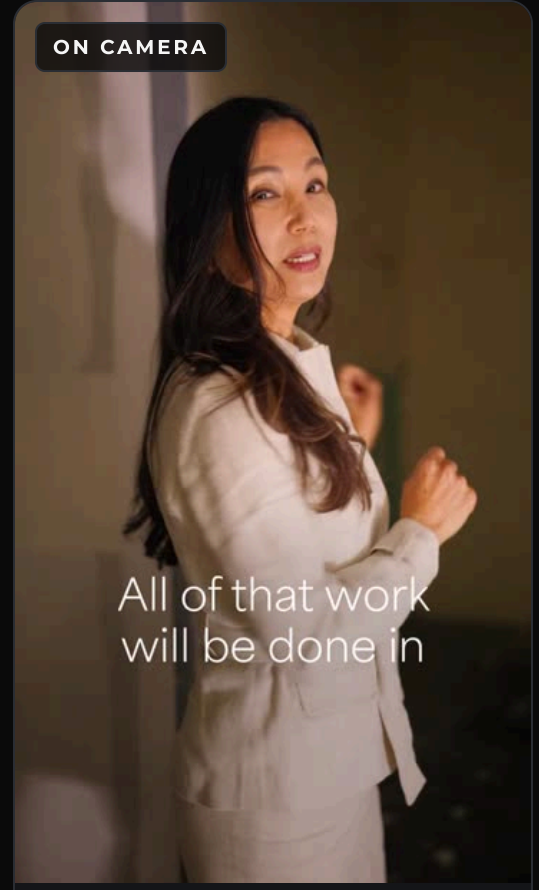

Same setup, tighter

"to be able to design smiles, print models,"

CAMERA
Slightly tighter on the same setup.

EDIT
A cut in instead of a zoom.

WHY IT WORKS
We get closer by cutting, never by scaling the clip.

24 1:40.6–1:45.2 · 4.6s

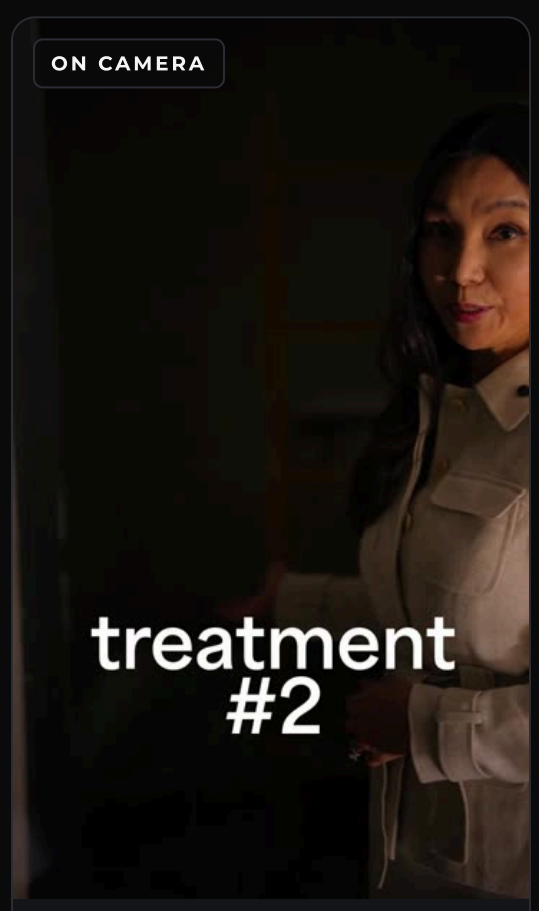

The Smile Design Laboratory

"custom smile design. All of that work will be done in the Smile Design Laboratory."

CAMERA
Holds on the same angle as she names the lab.

EDIT
"Smile Design Laboratory." in bold. Short whip out.

WHY IT WORKS
Naming the room is the payoff of the lab section.

25 1:45.2–1:48.5 · 3.3s

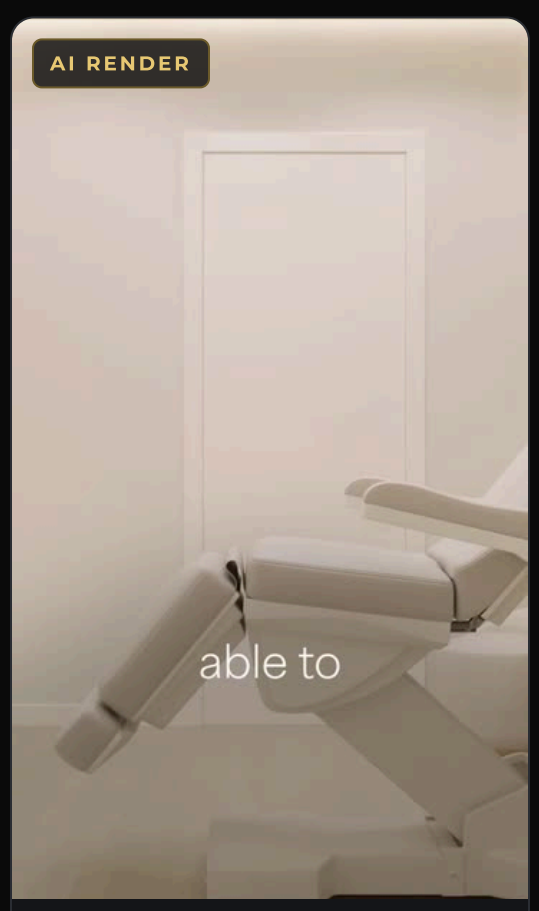

Doorframe wipe: treatment #2

"Yes. This is treatment #2"

CAMERA
She steps toward a doorway, the dark frame wipes the lens.

EDIT
"treatment #2" title fades up big, then ghosts.

WHY IT WORKS
Titles work like chapter markers so viewers never get lost.

26 1:48.5–1:53.5 · 5.0s

Render: treatment room #2

"And in this room, we will be able to help our patients with a"

CAMERA
High angle on a white treatment bed in a bright room. Slow slide.

EDIT
Cut in on "room".

WHY IT WORKS
Raw room, then render. The pattern holds all the way through.

27 1:53.5–1:57.7 · 4.2s

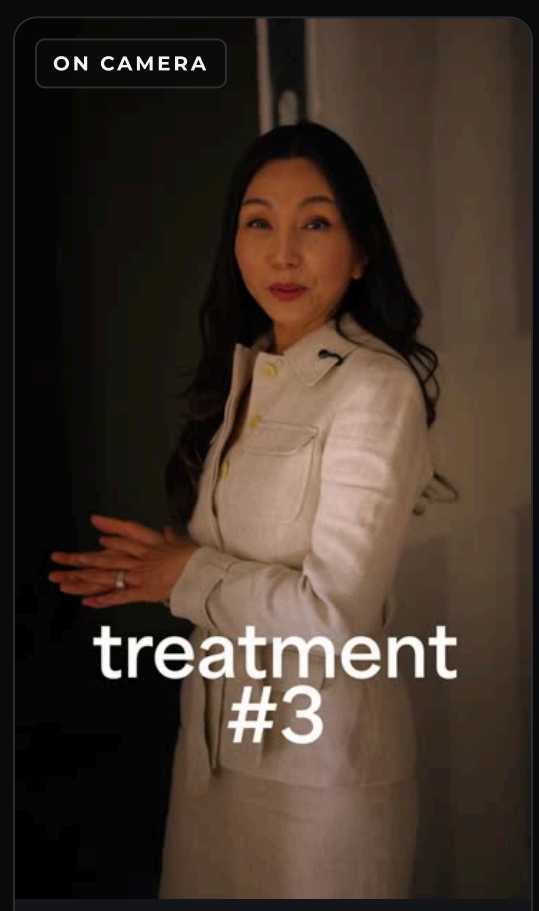

Low-key MCU

"lot of the facial and oral health rejuvenation."

CAMERA
Medium close-up, a doorframe edge in the foreground, warm side light.

EDIT
Captions only, no title.

WHY IT WORKS
Foreground edge keeps even a simple talking shot layered.

28 1:57.7–1:59.3 · 1.6s

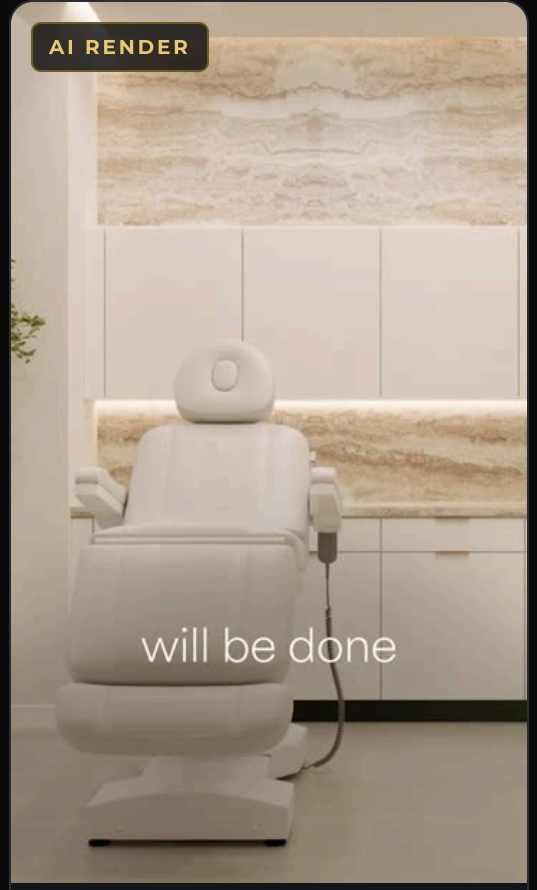

Title beat: treatment #3

"This is treatment #3"

CAMERA
Same low-key look, quick beat.

EDIT
"treatment #3" title.

WHY IT WORKS
A short beat that sets up the last reveal.

29 1:59.3–2:07.6 · 8.3s

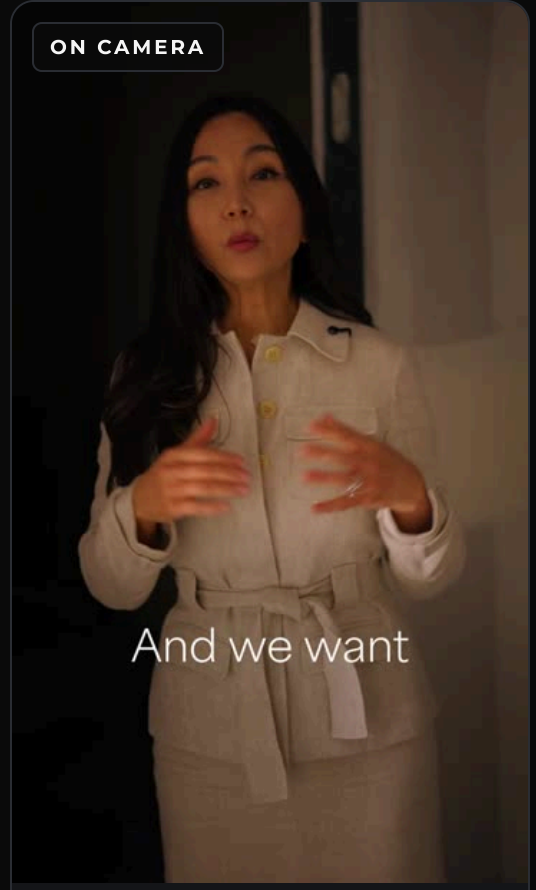

Render: Smile Design studio

"It's where all of the smile design work will be done in this room. So this is my Smile Design studio."

CAMERA
Dental chair against an onyx wall. Long lateral slide that reveals an olive tree.

EDIT
Held for 8 seconds, the longest look at any room.

WHY IT WORKS
The last room is her signature room, so it gets the most time.

30 2:07.6–2:29.5 · 21.9s

The close: her philosophy

"Naturally, our teeth should already be beautiful... support better breathing and optimal wellness."

CAMERA
The one frontal shot in the video, saved for the close. Background falls to black, warm light from one side, gentle drift.

EDIT
"foundation" in bold. 22 seconds, no cutaways.

WHY IT WORKS
The tour earned this. Side light keeps the frontal shot from ever looking flat.

31 2:29.5–2:33.1 · 3.6s

Logo card

CAMERA
Aviara logo over sheer white curtains.

EDIT
The logo fades up, the music finishes the video.

WHY IT WORKS
Ends on the brand, clean and quiet.

COLOR GRADE

Three looks, one warm thread

The grade changes with the room, but it is never cold. Every shot reads warm (red above blue), whites go cream instead of blue, and the darkest room drops almost to black. The swatches and meters below are measured from the final export, darkest to brightest.

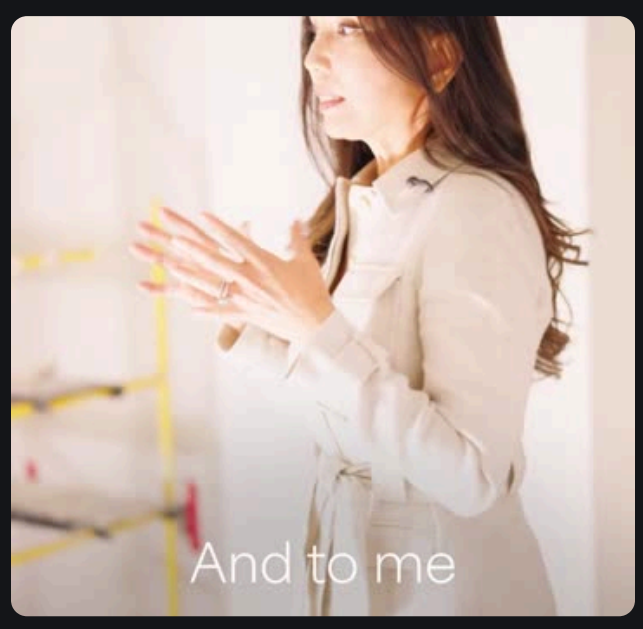

Golden raw space

Shots 3 to 5, 11, 13

Brightness		0.41
Warmth		0.26
Saturation		0.54

- **Warmest look** in the video. Push white balance toward amber.
- Let the construction stay honest: raw wood, yellow scaffolding, red floor covering.
- Keep highlights creamy, never clipped.

High-key cream

Shots 14, 17 and every render

Brightness		0.76
Warmth		0.11
Saturation		0.15

- **Bright and soft.** Lift exposure, lower contrast.
- Pull saturation way down. Skin and walls go cream.
- Whites must read warm. A blue white breaks the look.

Low-key amber

Shots 18, 22 to 30

Brightness		0.20
Warmth		0.12
Saturation		0.37

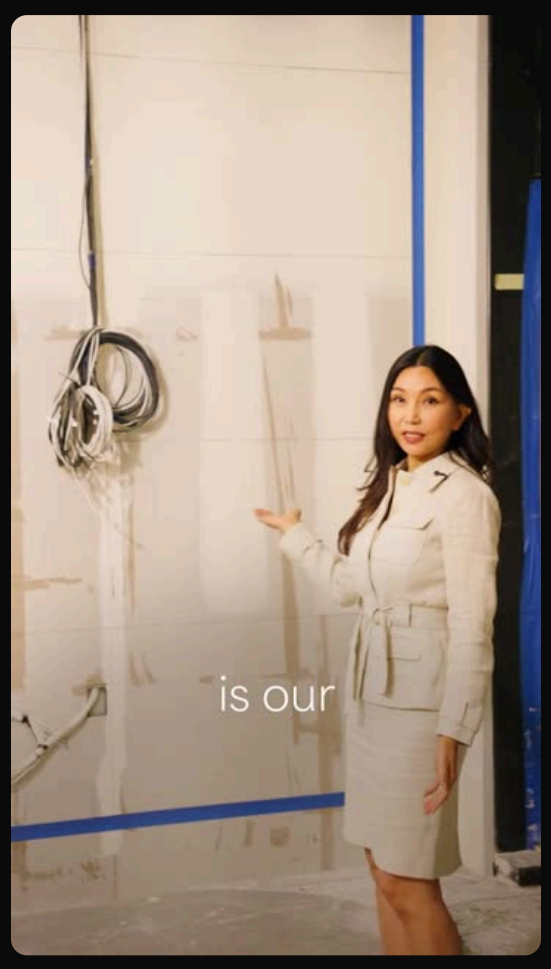

- **Let the shadows go almost black.** Do not lift them.
- One motivated light from the side, protect the skin tones.
- Brightness drops to about a quarter of the cream look.

- **Match renders to their room.** The renders measure the same warmth as the high-key cream look, so they cut against the real footage without a jump.
- **One exception on purpose:** the "most clinics focus on treatment" cutaway at 0:59 is fully desaturated. Black and white means "the old way". Color comes back the moment she says what we do differently.
- **The mood shift is the story.** Bright and golden while we explore, low-key amber once we are inside the clinical suite. Grade the change in on the cut, not with a slow fade.

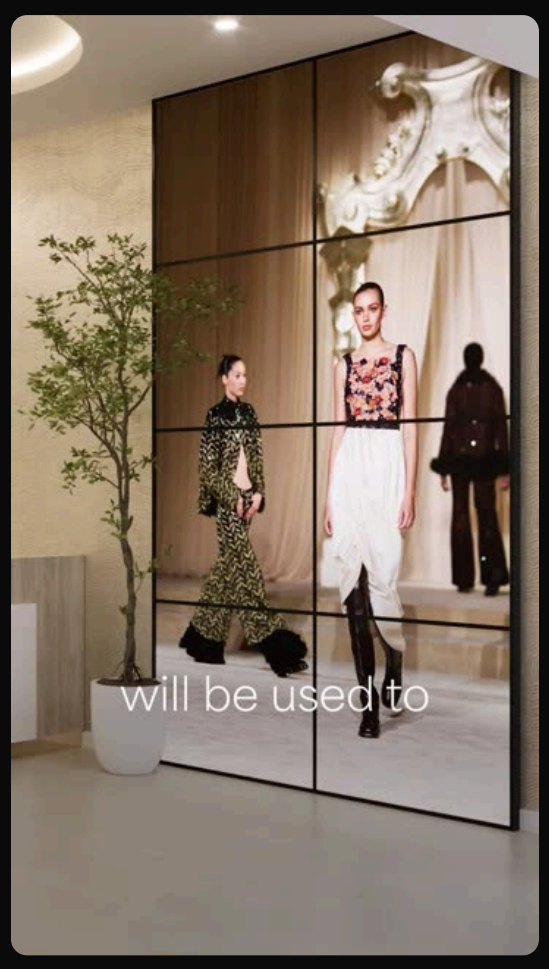

AI RENDERINGS · CLAUDE + HIGGSFIELD

Show the room before it exists

The move that makes this video: she stands in a construction site, says the name of a room, and we cut to the finished room. Eight renders in 2:33. Here is how each pairing is built and how we make ours.

Raw · 0:17 "to the right of me is our video wall"

Render · 0:19 the finished video wall, cut on "video wall"

Raw · 0:27 "this storefront right here area"

Render · 0:32 the arched shelves, cut on "products"

The workflow

01 **Shoot a clean plate.** On shoot day, grab 5 seconds of every raw room with nobody in it, from the angle she will talk about it.

02 **Claude writes the prompt.** Give Claude the design brief and the script line. It writes a render prompt with materials, light and palette, so every room matches.

03 **Higgsfield renders the room.** Image to image from the plate, keep the walls and windows where they are, finish the space. Make 4 to 6 options and pick one.

04 **Higgsfield animates it.** Image to video with one slow lateral slide, 3 to 5 seconds. Slide the same direction as the shot before it. No zoom.

05 **Grade and place it.** Grade to the room's look, add the same grain as the camera footage, and cut in on the exact word that names the room.

Starter prompt (edit per room)

```
Photoreal interior of a luxury aesthetic and
wellness clinic, [ROOM NAME], Beverly Hills.
Keep the exact walls, window and ceiling from
the reference image. Finishes: warm cream
plaster, travertine and onyx accents, arched
niches, oak, soft 3000K cove lighting, one
olive tree. Calm, editorial, no people.
Vertical 9:16, eye level, 24mm lens look.
```

```
Motion: slow lateral dolly left to right,
3-5 seconds, steady, no zoom, no camera shake,
light stays still, cinematic.
```

- **Use the brand's real logo** on signage only when we have the file. Never let the AI invent lettering.
- **Check every frame** for warped lines, melted furniture and fake text before it goes in the timeline.

CAPTIONS, TITLES, TRANSITIONS, SOUND

The finishing layer

Captions

- **Two to three words at a time,** white, thin sans serif, centered in the lower third. Never a full sentence on screen.
- **Bold one key word** per line: breathe, live, smile, sterilization, laboratory, foundation. The weight swap does the emphasis, no color.
- **Big titles name the place:** "little tour", "video wall", "treatment #2", "treatment #3". They fade up, hold, then ghost out.
- **Hand-drawn marks** for the big ideas: a circle around "root causes" (1:07), a scribble under "improve" (1:12).

breathe better, | **live** better, | and **smile** | the **foundation**

Transitions and sound

- **Hard cuts are the default.** Effects are saved for room changes.
- **Light leaks** carry us between spaces (0:10, 0:14, 0:31).
- **Whip blur** moves us from the storefront to the consultation room (0:45).
- **Foreground wipes:** a dark doorframe passes the lens to enter the clinical suite (1:15) and treatment #2 (1:45).
- **Practical flare** sweeps across the dark room at 1:28.
- **Voice first.** The music bed measures about 11 dB under her voice and only comes up when she stops talking: the opening drones and the logo card.

TIME	MOVE	WHY IT WORKS
0:00	Open on two drone shots, no voice	Beverly Hills at golden hour says luxury before she says a word.
0:08	Punch in on "little tour"	Same moment, new angle. The cut resets attention without leaving the room.
0:13	First raw room to render	Sets the pattern in the first 15 seconds, so the viewer waits for every reveal.
0:59	Black and white cutaway	Contrasts "most clinics" with her approach without saying anyone's name.
1:15	Grade drops to low-key	Tells you we are in the serious, clinical part of the space.
2:08	Longest shot saved for last	22 seconds on her message. The tour already earned the attention.

BEFORE YOU EXPORT

Editor checklist

Run every tour edit through this list before you post it for review. Checks stay on this device only.

- [ ] **Stable:** no shaky handheld in any tour shot
- [ ] **No digital zoom:** zero scale keyframes, push in by cutting
- [ ] **Every raw room has its render,** cut in on the word that names it
- [ ] **Grade:** warm whites, cream not blue, low-key rooms go dark
- [ ] **Titles name the place** (tour, room, treatment number)
- [ ] **Average shot around 5 seconds;** long holds only for the close
- [ ] **No flat frames:** subject at 3/4, off-center, something in the foreground
- [ ] **New room, new angle:** no two shots in a row share a framing
- [ ] **Renders checked** for warped lines, melted furniture and fake text
- [ ] **Captions:** 2 to 3 words, one bold key word, lower third
- [ ] **Music about 10 dB under the voice,** up only when she stops talking
- [ ] **End on the logo card,** about 3 seconds

Questions?

Watch the full video once with sound, then once with this page open. Drop your questions in Slack, tag Felipe, and include the shot number you are asking about.
